Credit Name: CSE3010 - Computer Science 3											
Assignment Name: PhotoAlbum3.java											
How has your program changed from planning to coding to now? Please explain?											
Originally the code was based off of the code for the BreakAPlate assignment which used an ActionEvent, a ActionListener, a JPanel, a JFrame, a JButton, a JLabel, 2 Imagelcon's, and 2 String's.											's.
The code for the first version of the photo album however used an ActionEvent, a ActionListener, a JPanel, a JFrame, a JButton, a JLabel, 4 Imagelcon's, and 4 String's.											
It attempted to use if and else-if statements to determine which photo should be displayed when the button called "Next" is clicked.											
The second version of the code was the same as the first but used a different photo and rearanged the if and else-if statements.											
The third version of the code was a complete redo of the code nothing from the previouse versions carried over except for a JFrame.											
The forth version of the code named PhotoAlbum3 is the code I have currently and used an ActionEvent, a ActionListener, a JPanel, a JFrame, a JButton, 2 JLabel's, 4 Imagelcon's, and 4 String's.
